lowest lights meet.*

# What are some of the objectives we are attempting to achieve in this series of presentations

1. To see a larger esoteric perspective as we move towards 2025.
2. To understand the importance of electricity and magnetism in the Occult and Ageless Wisdom Teachings and their relationship and parallel to certain new scientific discoveries.
3. It is not merely what we present that is important but how we present it.

The Tibetan master DK has indicated numerous times in his many volumes of occult teachings that symbols are the language of initiates and that these symbols must be understood and mastered.

We will be presenting a lot of information but it is in the symbols and particularly the animations we share that summarize and often reveal the deeper side of the occult path. Without this preparatory information these deeper truths we are attempting to share can easily be seen as just pretty pictures or videos.

Often in my conversation with others who have studied the Ageless Wisdom Teachings I hear the comment that I never read that in his works. The many quotes we use by the Master DK clearly indicate that the many ideas presented here are not originals of mine but come directly from the Masters, hence they carry real authority. I am just the messenger.

It is common knowledge revealed by studies in neuroscience that information is assimilated and comprehended 3 times as fast and retained 3 -5 times longer with pictorial images rather than the spoken or written words. We will be using all three approaches for maximum effectiveness.

## A newer and more adequate teaching next century

“First of all, the books were published and they came out in ordered sequence and provide a body of teaching and of truth which will serve the needs of the coming generation. It is for my disciples to safeguard this presentation of truth during this century and to see to it that the books are sent forth steadily upon their mission, **until they are finally superseded next century by a newer and more adequate teaching.**” (DINA 1 31) 1955

## I have given you this teaching in terms of the Christian presentation

“Occasionally (usually once in a century after their Conclave at the close of the first quarter) there is the imparting of a more advanced body of teaching. **This teaching will only be recognized by a few of the foremost disciples in the world;** it will, however, prove to be the ordinary form of occult teaching during the next developing cycle. It is this type of work which I have been endeavoring to do with the aid of A.A.B” (DINA 2 318)

"I have given you this teaching in terms of the Christian presentation as it may be simpler for you to grasp, **but there are many other formulations and approaches to these truths and the newer they are the more difficult necessarily are they to present.** Only those who are on the immediate verge of initiation will understand... (DINA 2 260)

# A New Scientific Language

From the next few statements by the Tibetan Master it appears one of those things we should be looking for in this 2025 period is a new scientific language of the Ageless Wisdom Teachings based on the idea that everything is connected, not as mere theory but as an irrefutable fact that can be clearly demonstrated even on the material plane through conventional science.

# New presentations of truth and the art of healing

“The physical body is not yet generally recognized as an electrical unit; its nature as pure atomic energy is not yet realized; the fact of the energy body, the etheric vehicle, is not at this time recognized in the teachings of the modern medical schools.... **Until such time as the new scientific formulas and the new approach (which the discovery of the release of atomic energy has made possible) have become more generally understood, are a familiar subject of discussion and couched in familiar language, the coming science of healing must remain behind a veil of unsuitable language and hidden by inappropriate words.**

This fact, as I have often told you, handicaps all new presentations of truth... So it is with the new themes and the great discoveries which are on their way and which will eventually affect every department of human life, including the Art of Healing.” THE TIBETAN (EH 715)

## **An entirely new language related to energy and force**

“We are on the verge of entering a new era in scientific unfoldment, owing to the discovery of how to release the energy of the atom. Not even the scientists responsible for the discovery have the faintest idea of the far-reaching effects of this momentous happening. From the angle of our subject and the theme of this volume, an entirely new language related to energy and force is already in the making: (EH 714)

# The Nature of the Antahkarana and a new vocabulary

“One of the difficulties connected with this study of the antahkarana is ... we have practically to create a new terminology, for there are no words suitable to define our meaning. **Just as modern sciences have evolved a complete new terminology of their own during the past forty years, so this science must develop its own peculiar vocabulary.** In the meantime, we must do the best we can with the words at our disposal.” (RI 453)

# The soul will necessitate a new language approach

“Human thought is now entering a field for which there exists, as yet, no true language-form, for we have no adequate terms, and in which word-symbols mean but little. Just as the discovery of the automobile, and the radio have necessitated the formulation of an entirely new set of terms, phrases, nouns and verbs, so in the years that are coming the discovery of the fact **of the soul will necessitate a new language approach**... So the psychologist of today is in the dark very often and understands not what we are trying to convey, for the new language is not yet evolved and the old terms are inadequate. **I am, therefore, unable to do more than employ the terms which seem to me to be the most suitable, knowing that I am failing to express the true significance of my ideas, and you are consequently gaining only an approximate understanding and conception of the concepts I am endeavoring to expound.**”

(EP 1 426)

# The oldest and newest esoteric teachings on the planet fused

Having briefly outlined the idea of a new and more advanced scientific language for the Ageless Wisdom Teachings let us now explore some of the concepts and ideas DK, and AAB have stated about the Science of Electricity that was designated by DK “as the greatest spiritual science and area of divine knowledge in the world” (ROC 123) Since he also says this about the teachings of Esoteric Astrology I prefer to compare and categorize these two teachings as, one being the **NEWEST** and greatest teachings on the planet, the Electrical, and the other, Esoteric Astrology as the greatest, but **OLDEST** esoteric teachings on the planet. When these two sciences are combined as we will attempt to demonstrate in these series of presentations much new light and revelation can occur.

# Bringing about an electric revolution upon the planet

- “If this Treatise serves no other purpose than to direct the attention of the more scientific and philosophical students to the study of force or energy in man and in groups, **and to interpret man and the human family in terms of electrical phenomenon**, much good will have been accomplished. The polarity of a man, of a group, and of a congerie of groups, the polarity of the planets and their relationship to each other, and of one principle to another, the polarity of the subtler vehicles, **and the scientific application of the laws of electricity to the totality on the physical plane will bring about a revolution upon the planet second only to that effected at the time of individualization**”. (TCF 714)

## Part 1.

# New Cosmologies based on electricity

- Some modern day sciences, particularly plasma physics, astronomy and new cosmological theories are confirming what Esoteric Astrology has been saying for centuries and that is that there are powerful influences that emanating from outside of our solar system that radically effect us, and that these powerful forces are carried on hidden waves of electrical and magnetic substance that in their lower form are called Plasma and in their higher Fohat.
- The Tibetan Master DK predicted that science would begin to slowly reveal several of the 4 higher sub-planes of the physical-etheric as we move into the 21st century.

# A new scientific language based on electricity, magnetism and the quantum world

- Nassim Hamein one of the new quantum physicists and cosmologists that DK predicted would make their arrival after the entry into this new century we are now in has presented and written extensively on creating a parallel between the hidden quantum worlds and the Ancient Wisdom Teachings from many different diverse traditions.
- Here is a short trailer titled **The Connected Universe** and narrated by Sir Patrick Stewart giving a brief overview of his work that also outlines some areas of research we will also be exploring in this brief presentation.

A portrait of Nassim Haramein, a man with a beard and long hair, wearing a dark suit jacket over a light-colored shirt. He is smiling and has his arms crossed. The background is a dark, textured surface with faint, glowing geometric patterns and lines.

NASSIM HARAMEIN

# Quantum Revolution

A New Perspective of  
How the Universe Works

# Space is not empty but a living entity

Nassim in this previous video has ask the key question, what is space?, and states that it is space that should define matter, rather than the other way around.

HPB brought clarity to the importance of understanding space when she stated 150 years ago that “space is an entity, and time is the duration that entity has chosen to work out some aspect of its Plan or Will.”

DK prophesized **that when scientist become Intuitives** as Nassim, we will have a revolution in how reality is interpreted and understood that will change every aspect of human living.

Let us explore a statement made by the Tibetan that can help formulate this new perception of reality that is made up of myriads of electrical and magnetic forces.

# The Occult Path is a Forcing Process

- Space is not empty but teeming with quantum energies and forces that create and sustain everything. In fact, there really is nothing material in the universe but simply the ebb and flow of energy and force driven by the Heart and Will of some superior entity.
- The occult path is a forcing process in which the student directs themselves into the periphery of those spiritual lives more advanced than himself and of which he knows practically nothing

## Part 1.

# New Cosmologies based on electricity

- Modern day physics, astronomy and new cosmological theories are confirming what **Esoteric Astrology** has been saying for centuries, and that is that there are powerful influences that emanating from outside of our solar system that radically effect us, and that these powerful forces are carried on hidden waves of electrical and magnetic substance that in their lower form are called Plasma and in their higher Fohat.
- The Tibetan Master DK predicted that science would begin to slowly reveal several of the 4 higher sub-planes of the physical-etheric as we move into the 21st century and that these discoveries would help unify humanity in new and creative ways.
- To those students who are on the cutting edge of these etheric discoveries that can be found in modern science, this truth DK has just shared is happening right now, and not it some far distinct future.

## Talking in terms of electricity, voltage and power, will help establish the essential brotherhood of man

“We shall see each other and all forms of divine manifestation as light units of varying degrees of brightness and shall **talk and think increasingly in terms of electricity, of voltage, of intensity and of power.** The age and status of men, in regard to the ladder of evolution, will be noted and become objectively apparent, the relative capacities of old souls, and young souls will be recognized, thereby re-establishing on earth the rule of the enlightened.

Note here, that these developments will be the work of the scientists of the next two generations and the result of their efforts... This will break down all barriers of race and all distinctions of color; the essential brotherhood of man will be established.”

(TWM 335-36) -1934

# Christ revises the Ancient Mystery Teachings in a new way through the Science of Electricity

“The Christ will also revive these Mysteries in other ways; not all will seek the church or Masonry for the revitalising of their spiritual life. The true Mysteries will also reveal themselves through science and the incentive to search for them there will be given by the Christ. The Mysteries contain, within their formulas and teachings, the key to the science which will unlock the mystery of electricity—the greatest spiritual science and area of divine knowledge in the world, the fringes of which have only just been touched. Only when the Hierarchy is present visibly on Earth and the Mysteries of which the disciples of the Christ are the Custodians are given openly to the world, will the true secret and nature of electrical phenomena be revealed.” (ROC 123-24)

## **A new scientific era of Ageless Wisdom Teachings with particular emphases on the 7<sup>th</sup> ray**

AAB in her outline and prophecy of the future teachings indicated that the splitting of the Atom had important consequences when in the 1940's she stated **“We are on the verge of entering a new era in scientific unfoldment, owing to the discovery of how to release the energy of the atom.”**

This comment by AAB we will now explore and see how it parallels a newer and more scientific model or interpretation of the divine initiatory experience for the 21st century and the New Aquarian cycle we are now entering.

# Prediction by DK

“...the releasing of the energy of the atom. This will completely change the economic and political situation in the world, for the latter is largely dependent upon the former. Our mechanical civilization will be simplified, and an era ushered in which will be free from the incubus of money (its possession and its non-possession), and the human family will recognize universally its status as a bridging kingdom between the three lower kingdoms of nature and the fifth or spiritual kingdom. There will be time and freedom for a soul culture which will supersede our modern methods of education, and the significance of soul powers and the development of the superhuman consciousness will engross the attention of educators and students everywhere.”

(TWM 334-35)

# Atomic Fission vs Atomic Fusion

## The Holy grail of energy production

What is commonly referred to as atomic fission by AAB is where atoms are split to create additional energy or force. For this fission to occur, electrons which make up the outer shell of the atom, must be first ruptured or pushed out of their stable orbits.

In atomic fission that AAB has outlined little was understood at that time around how dangerously toxic this splitting of the atom was or could become.

What AAB stated about the atom was entirely accurate and outlined how man must also go radiatory and release great amounts of spiritual energy. This statement however was also a metaphor and should not be taken to literally in its details.

Atomic Fusion may have been an essential part of what AAB was referring to but the understanding of this dynamic process did not exist technically at that time and will require additional years to become a more viable and full alternative to atomic fission.

# Star in a Jar and creating Artificial Suns

**The practical application of confining plasma, which is made up of atoms into a small area that can be used for unlimited and inexpensive sources of energy.**

**China Claims "Artificial Sun" Has Broken The World Record For Confined Plasma.**

*It's getting hard to keep up with all the records. JACK DUNHILL Published April 14, 2023*

**“The Experimental Advanced Superconducting Tokamak (EAST), sometimes called China’s “artificial sun”, has broken the world record for the longest confined plasma reaction, according to reports. The researchers claim to have maintained an ultra-hot plasma for 403 seconds, breaking their previous record of 101 seconds in 2017, and hope the milestone is another step towards the ultimate goal of efficient nuclear fusion.**

**Nuclear Fusion differs from fission as it involves the merging of atoms to release energy, instead of splitting them. It produces far more energy than nuclear fission, doesn’t create toxic waste, can’t go into meltdown like a traditional nuclear reactor, and is a near-limitless source of energy”**

# Transmutating elemental force into devic energy

On December 5, 2022, Scientists at Lawrence Livermore National Laboratory's National Ignition Facility have made history by successfully producing a nuclear fusion reaction resulting in a net energy gain, a breakthrough hailed by US officials as a “landmark achievement” and a “milestone for the future of clean energy.”

When undergoing spiritual initiation, technically, what happens is that you disturb and eject the heavier involutory atoms in one or other of the 3 lower vehicles and you replace or transmutate them with higher devic and angelic evolutionary atoms.

Let us now explore the atom and its constitution in greater detail to bring more understanding to this basic structure of the material world in which we live, as well as other spiritual world's that lie just outside of our normal perceptions

# Electron Cloud Model

- Examining the atom in greater detail in the next image we can see that the electron cloud model is currently the most sophisticated and widely accepted model of the atom. The movement of electrons around the nucleus in this model is defined by regions where there is a greater probability of finding the electron at any given moment. These **regions of probability around the nucleus are associated with specific energy levels and take on a variety of odd shapes as the energy of the electrons increase.**

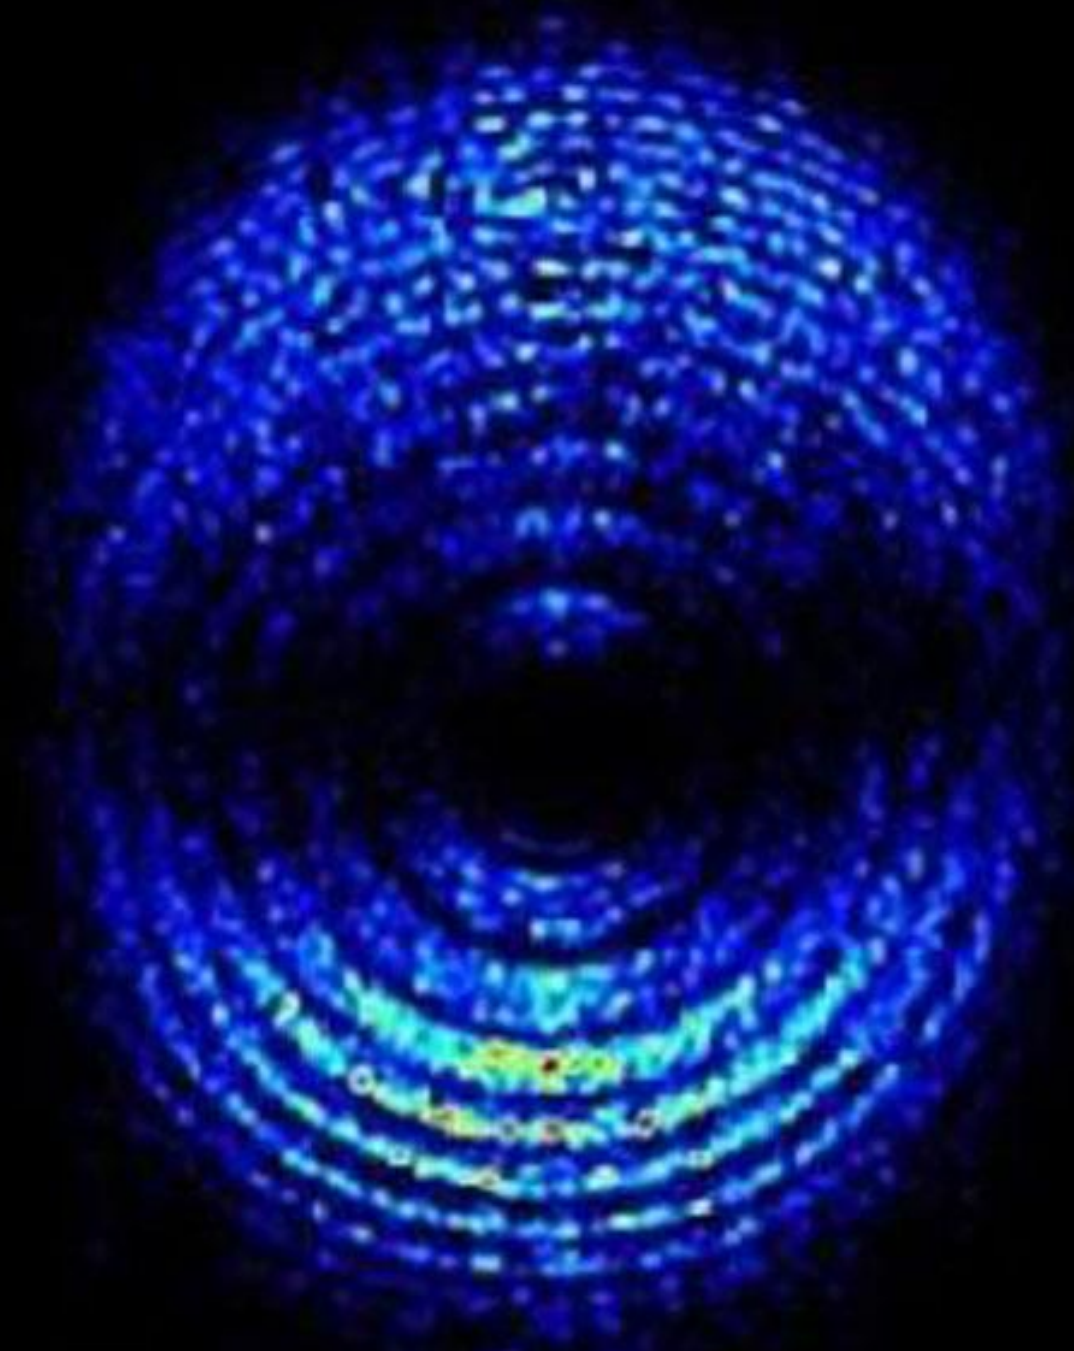

# Electron Cloud

**Electron cloud**  
(space where electrons  
are likely to be found)

**Nucleus**

# Catching light in action.

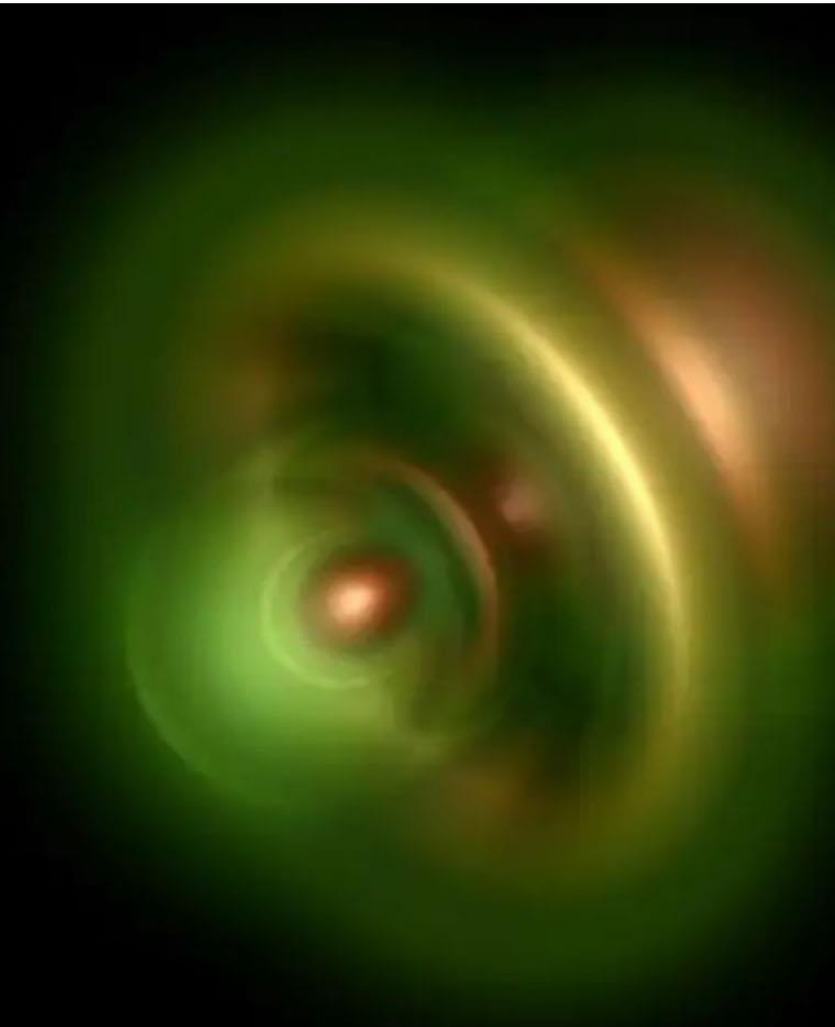

For the first time, physicists have measured changes in an atom to the level of zeptoseconds, or trillionths of a billionth of a second – the smallest division of time yet observed.

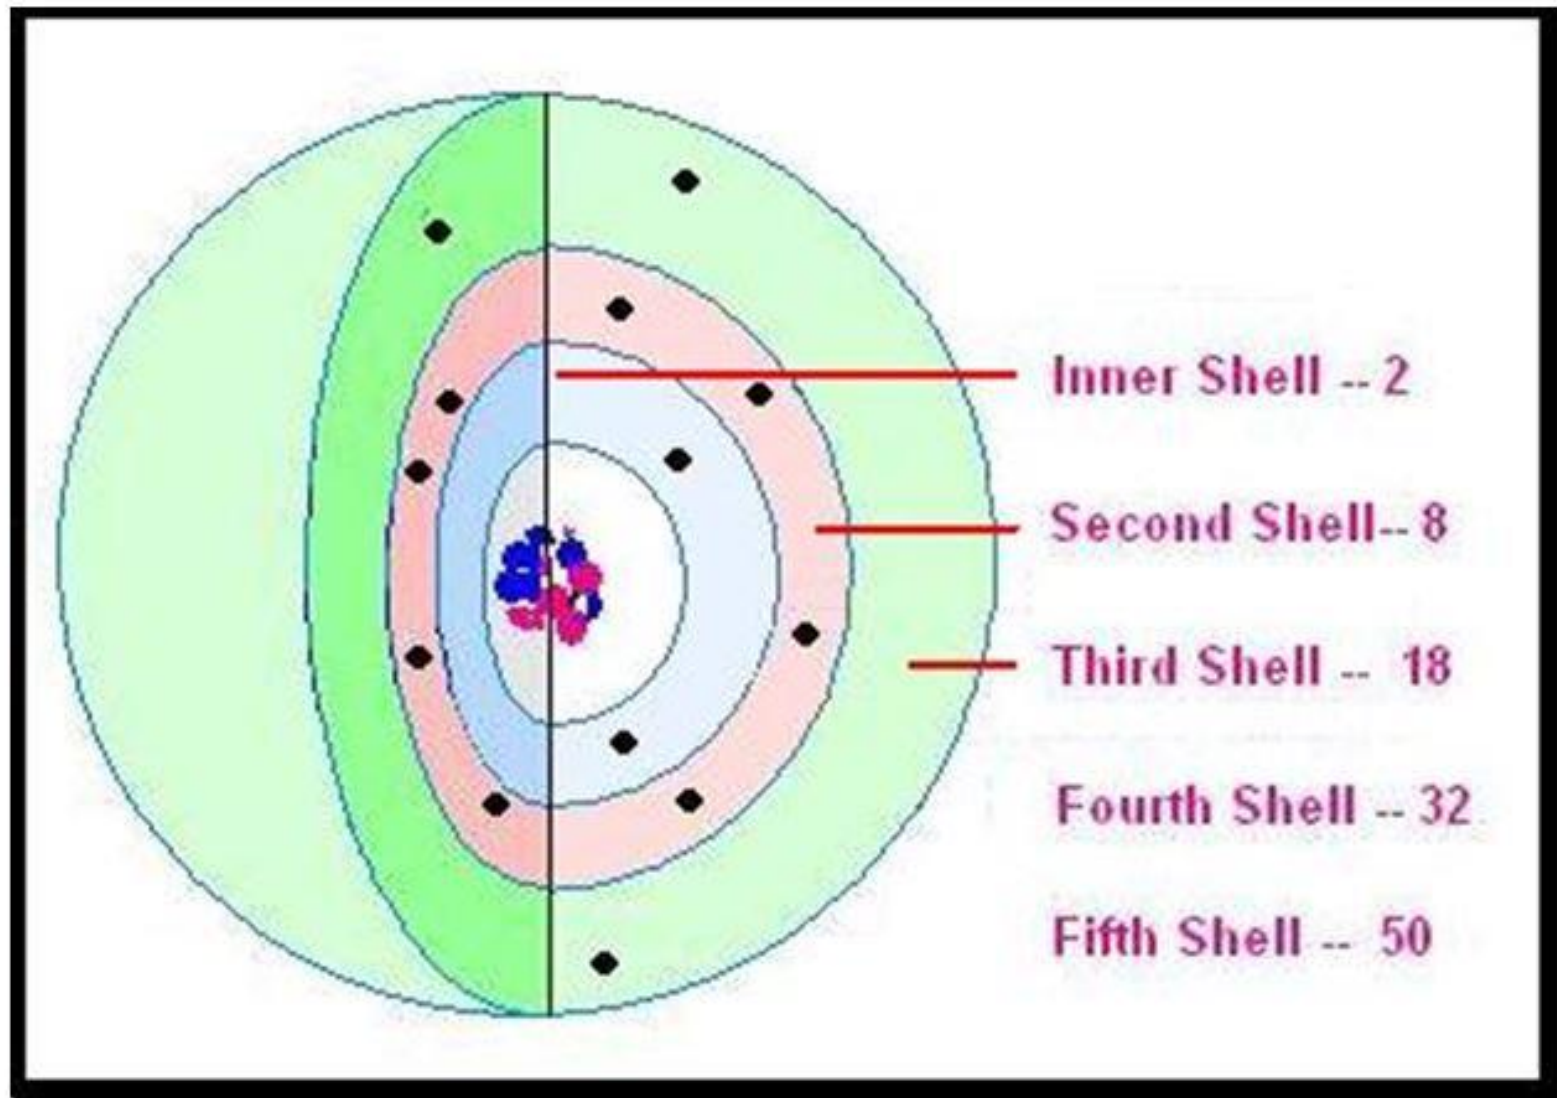

In this case, the speed demon was an electron escaping the bonds of its parent atom.

# Smallest sliver of time yet measured sees electrons fleeing atom

**Physics**

By [Rebecca Boyle](#) 📅 11 November 2016

<http://www.world-builders.org/lessons/less/les4/Vles4na.html>

# Jumping electrons or atoms

An electron will **jump** to a higher energy level when excited by an external energy such as light, a large heat increase or the presence of a more powerful electrical field.

This is also true of the electrons that are found in the atoms that comprise what esotericism call the etheric body, the astral body and the mental body. When an alignment is made to these higher groups of atoms through meditation and advanced visualization techniques, the atoms that constitute those lower vehicles go radiatory and emit higher forms of light.

This is the bases of the divine initiatory experience. Exposing oneself to those higher form of spiritual vibration or atoms will transform us into some new and more advanced.

What AAB is referring to in her many previous comments about atomic energy is the necessity for the disciple to destroy the outer confining walls of any of their lower personality sheaths or auric vehicles and to let in more spiritual and higher grades of spiritual atoms.

Let us give a visual idea of this transformation in the next image.

# Spinors, and Ceremonial Ritual of the tiny Atom

- Electrons are found in plasma and exhibit a certain quality of motion that are designated as a spinor. A spinor is the motion of an electron when explored at its tiniest level. Electrons not only orbit around the proton but they gyrate and spin in a most mysterious manner.
- This next animated clip demonstrates how these spinors which are composed of invisible strands of electrical and magnetic life connect all aspects of the universe into one integrated whole. These gyrating and elusive threads demonstrate **fohat** or cosmic electricity in its simplest and most primal form.

# The theory of Holism demonstrated on quantum levels

- What links all suns, planets, galaxies and diverse star system together into one unified field that reside physically millions of light years apart? Plasma. Plasma is often referred to as the fourth state of matter. Like so many magnetic bridges, these complex webs of electrical filaments bind all heavenly bodies into one common body proving in practical and on scientific levels the theory of Holism. The theory of Holism states we are all connected by hidden forces that are electrical in nature and penetrate the etheric, emotional, mental and spiritual realms.

# Plasma-Gateway to the infinite

**This next short video will demonstrate visually the nature of plasma and why its exploration has modern day applications as well as an occult side to its recognition. The atoms we earlier outlined are made up of electrical and magnetic forces that make up an intimate part of Plasma.**

**Although electricity or plasma cannot be seen, when passed through certain mediums such as air or certain inert gasses in an electrical vacuum as this next video demonstrate cause them to give off great amounts of energy, lighting up and glowing.**

**PHYSICS**

*Scientists "surprised"*

*Bizarre results from new experiments*

# As above so below

The Grand Macrocosm can always be found through the law of analogy in the Microcosm, in miniature.

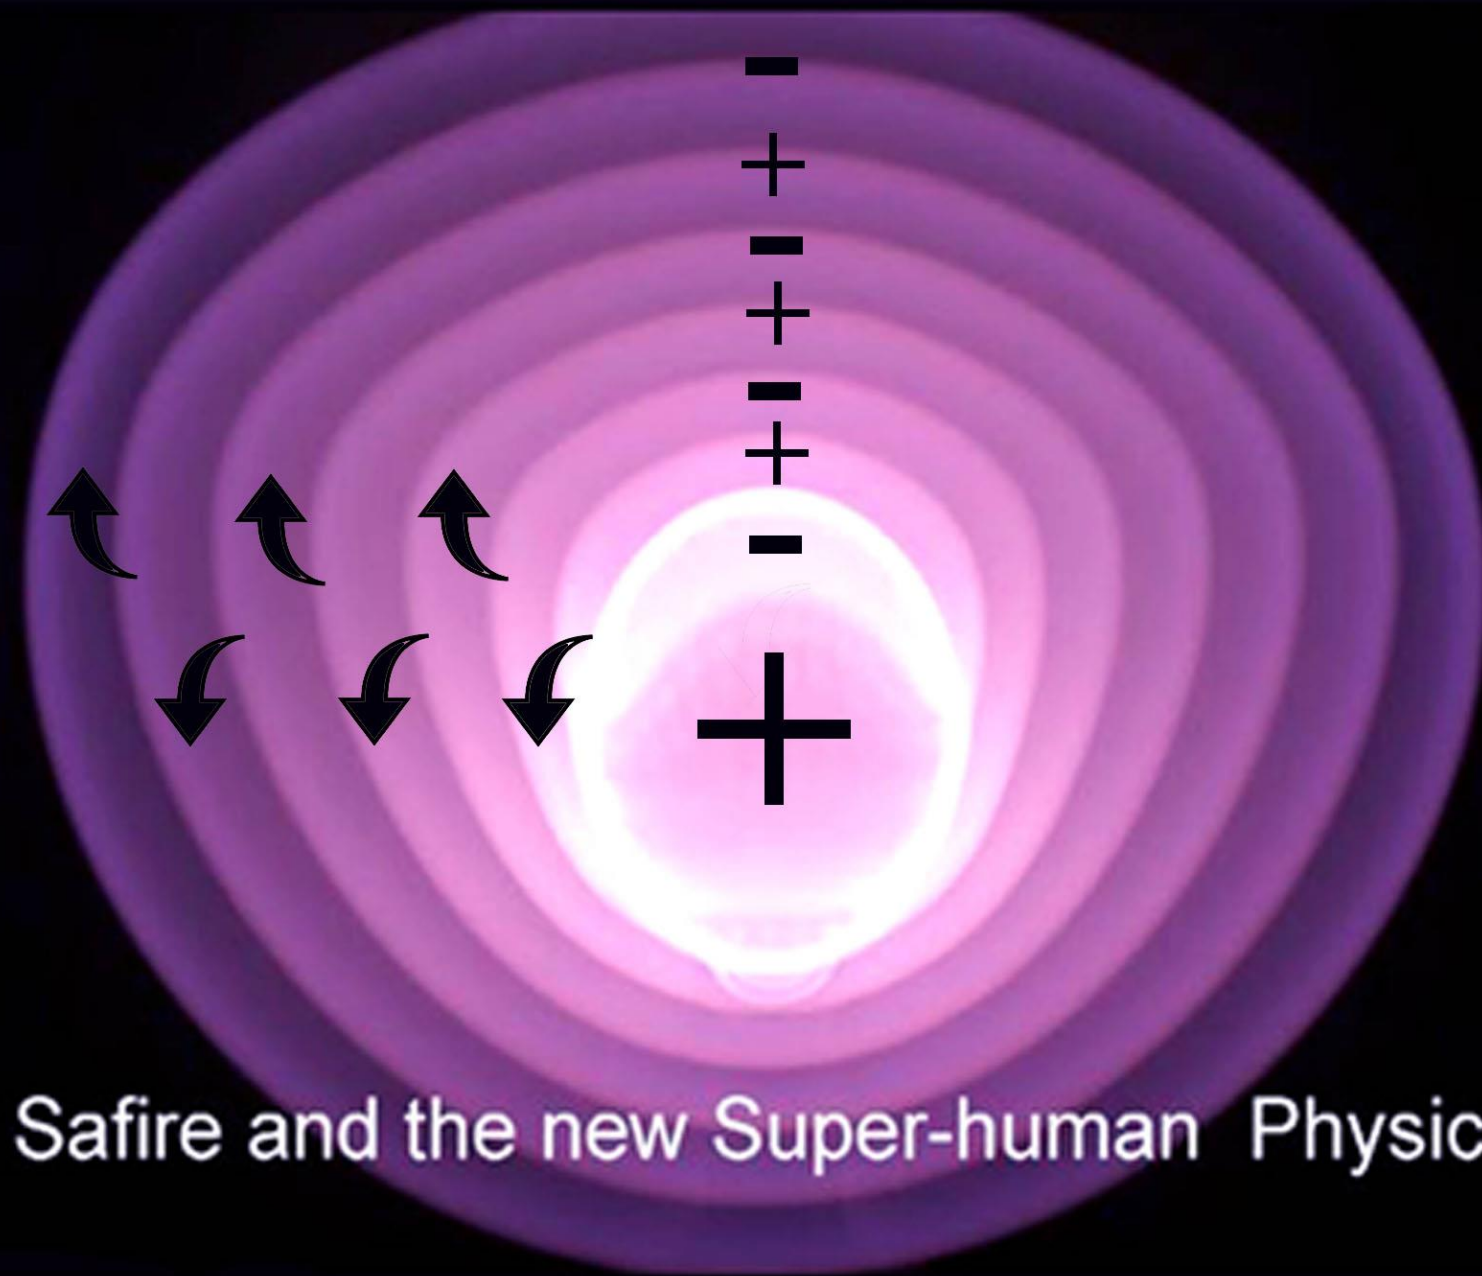

Looking at a cross-section of plasma when not in motion in the next image we can see its spherical shell-like composition. The concentric rings or shells that make up this plasma image are actually vortices that exhibit opposite electrical charges and are rotating in opposite directions. The tension of opposites occultly understood is a process that lies behind all growth and spiritual development.

This dynamic of opposite electrical charges is a part of all advanced work with spiritual triangles as we will demonstrate, and clearly parallels the development of our spiritual centers, auric sheaths, or inner bodies.

Its brilliant violet hue seen in this animation indicates the crossover point to the recognition of higher subplanes of the physical etheric realms where elemental and devic life that can now be recognized or contacted when the right interior focus is developed through meditation. The lower levels of the “devas of the shadow” are contacted by the study of different hues of violet colored light

**“As above so below” is an apt analogy for this comparison.**

# The Electrical and Magnetic nature of Plasma

- To summarize and recapitulate what was just shared in the previous video plasma is composed of high energy particles that are electrical and magnetically charged to the point they go radiatory emitting high levels of light, energy and force.
- This 4th state of matter, Plasma, is one of the key bridges between the material and the etheric planes.
- What we are outlining about the physical-etheric levels also has its astral, mental, and causal correspondences and parallels.
- Thought, as an example is transferred or manipulated on the inner planes by the Agni-devic groups of electrical lives who reside on very high mental levels.

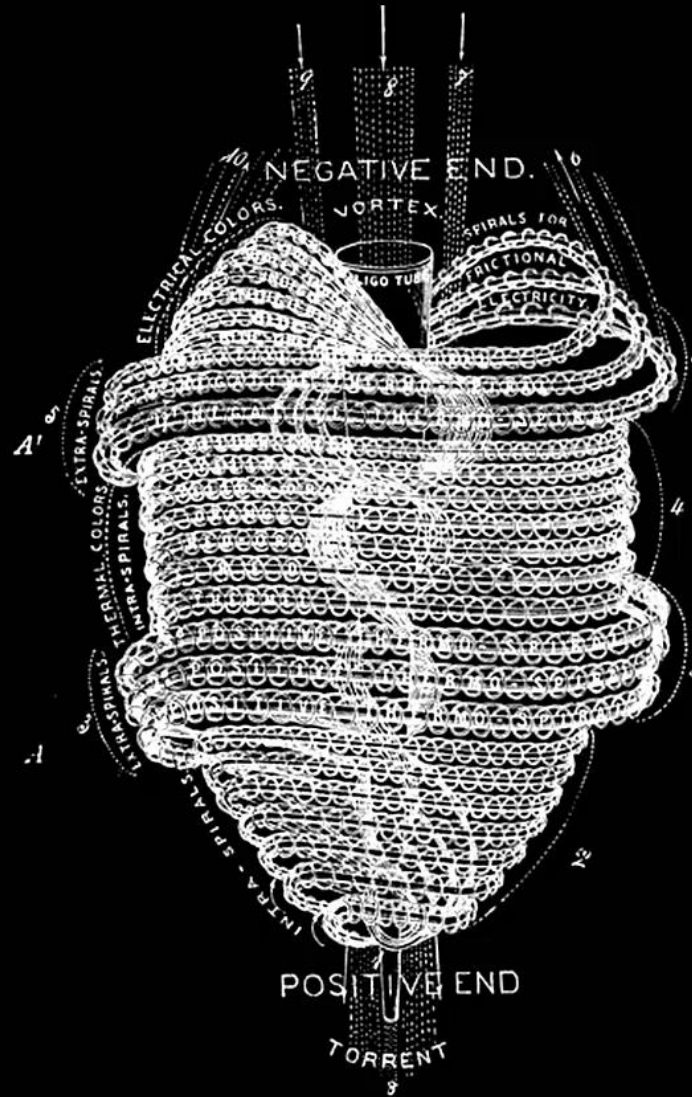

- Let us now explore what has been historically designated as the Occult Permanent Atoms.

# The arrangement of the Permanent Atoms

The arrangement of the spirillae within the permanent atoms varies on each plane and the ones most frequently described are those of the physical plane.

The arrangement of these tiny force vortices and their internal economy on each plane is one of the secrets of initiation and may not be revealed. One hint only may be given to guide the student: The astral permanent atom has its internal streams of force arranged so that the spirals do approach quite closely the conformation of a heart, though the pointed end is eliminated. The buddhic permanent atom has its spirillae arranged so as to form approximately a figure eight with a central stream bisecting the double spiral. (TCF 532)

# Babbitt's Ultimate Atom

The Divine ANU

# Astral Permanent Atom

# Buddhi

4

The buddhic permanent atom has its spirillae arranged so as to form approximately a figure eight with a central stream bisecting the double spiral (TCF 532)

# Physical Permanent Atom seen in motion

- As the animation of the physical permanent atom progresses we can see the faint outline of the astral and buddhic permanent atoms slowly emerging towards the end.
